EXPANDING CAPACITY : THE ADAPTIVE, THE TECHINCAL AND THE TOOLS

Webinar

Kids Mental Health Washington and Mary Bridge Children's Hospital are offering a webinar to help individuals and organizations boost their impact and efficiency in addressing today's complex youth behavioral health needs.

Participants will learn to distinguish between adaptive challenges—the deeper, people-centered issues that require shifts in culture, mindset, and relationships—and technical challenges—the systems, processes, and procedures that can be improved through practical solutions. We'll explore both sides of this work and share strategies tools, examples, and templates, that can help communities build, grow, and measure understanding and action.

Who Should Attend:
Community leaders, youth-serving professionals, educators, mental health providers, school-professionals, and anyone committed to building stronger systems of support for young people.
